

### **What Is Jibe?**

Jibe is defined as a platform for virtual world development based on 3 core elements:

1. Front end editor and client.
2. Middleware & inworld code & services.
3. Backend server systems.

Jibe is a 3 dimensional virtual world platform. Similar to video games yet designed in such a way that any type of use case can be created on top of it such as medical simulations, corporate training, casual gaming, music concerts, tradeshow, industrial training and more. Jibe is an extensible architecture which means our middleware abstraction layer talks with multiple backend systems for networking (SmartFox & Photon currently) & frontends (Unity3D now-ready for WebGL & more) for edit & deploy.

### **How do I get started with Jibe?**

You can get pre-made templates from ReactionGrid Inc. You can have our team develop custom designs. You can use 3rd party developers or in house developers. Or you can do a mix of all of these options.

### **How do people access the 3D spaces?**

Jibe is currently accessible via web browsers with a small plugin on Windows and Mac machines. It is also accessible via desktop applications. Upcoming in 2011 is iPhone, iPad, iPod and Android devices.

### **Who uses Jibe currently?**

Fortune 100 companies, large universities, school districts, AAA game publishers, small and medium developers and individual users. We have plans for everyone.

### **What basic features does Jibe have?**

- -3D avatars customizable for your use case. Industry mesh object imports such as .3ds, .dae, .fbx, .obj to name a few.
- Text chat public and private. Vivox voice integration.
- Hooks for our optional augmented reality, SCADA, robotics & telemetry apps.
- Basic virtual world scripts like sit scripts, teleporting, breakout rooms.
- Built in registration database, web sign up forms & password reset forms.
- Ability to login using your current user systems or 3rd party like FacebookConnect.
- Full Unity3D inworld script source code for unlimited customization.
- Database logging of logins and all inworld events for training and tracking users.
- Report generation in a searchable, sortable, filterable, group-able web based application.
- Slideshow system with web based image and video uploader.
- Delivered turn-key hosted by ReactionGrid Inc. or on your servers in about 2 clicks.

### **How can I learn more?**

Visit our site at <http://reactiongrid.com> where you will find demo spaces, client lists, purchase information and more. Email us at [create@reactiongrid.com](mailto:create@reactiongrid.com) to find out when we can visit you in person, where our next public event is at or schedule a web based tour.
